

Lab 4 — Microsoft Defender for Cloud: CSPM & Security Recommendations

SC-500 Azure Security Engineering Portfolio Lab

Subscription	Azure subscription 1
Assessed resources	2
Secure Score	50%
Critical recommendations	0
Primary finding	Storage account should use a private link connection
Finding status	Not evaluated

Objective

Assess the lab subscription with Microsoft Defender for Cloud, review security recommendations, investigate a network-security finding, and document remediation without enabling unnecessary paid Defender plans.

Security Posture Assessment

- 1 Azure subscription assessed.
- 2 resources assessed.
- 0 critical recommendations and 0 security alerts shown.
- Secure Score displayed at 50%.
- 10 recommendations shown as not evaluated.

Finding: Storage Account Private Link

The recommendation **Storage account should use a private link connection** identified an affected storage account. Defender for Cloud described the risk of exposing storage communications when private connectivity is not used. Recommended remediation: add a private endpoint to enforce secure private communications.

Security Engineering Decision

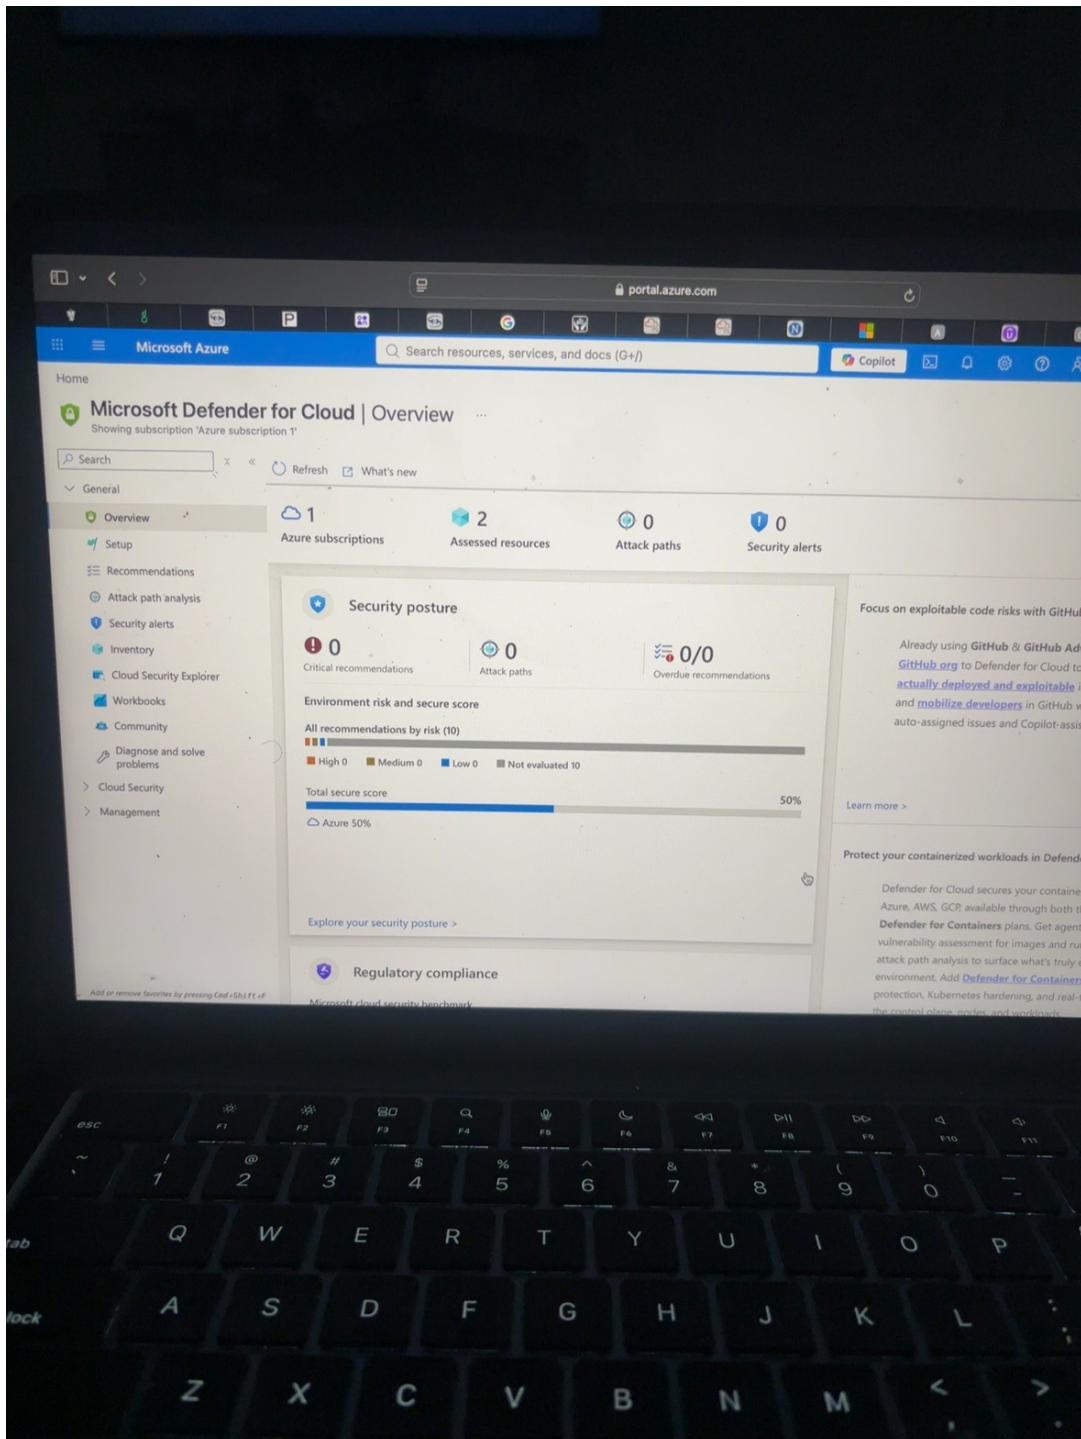

No remediation, exemption, or enforcement action was applied. The finding was documented first. The Graph view reported that graph context requires a Defender CSPM upgrade, so the paid upgrade was not enabled.

Skills Demonstrated

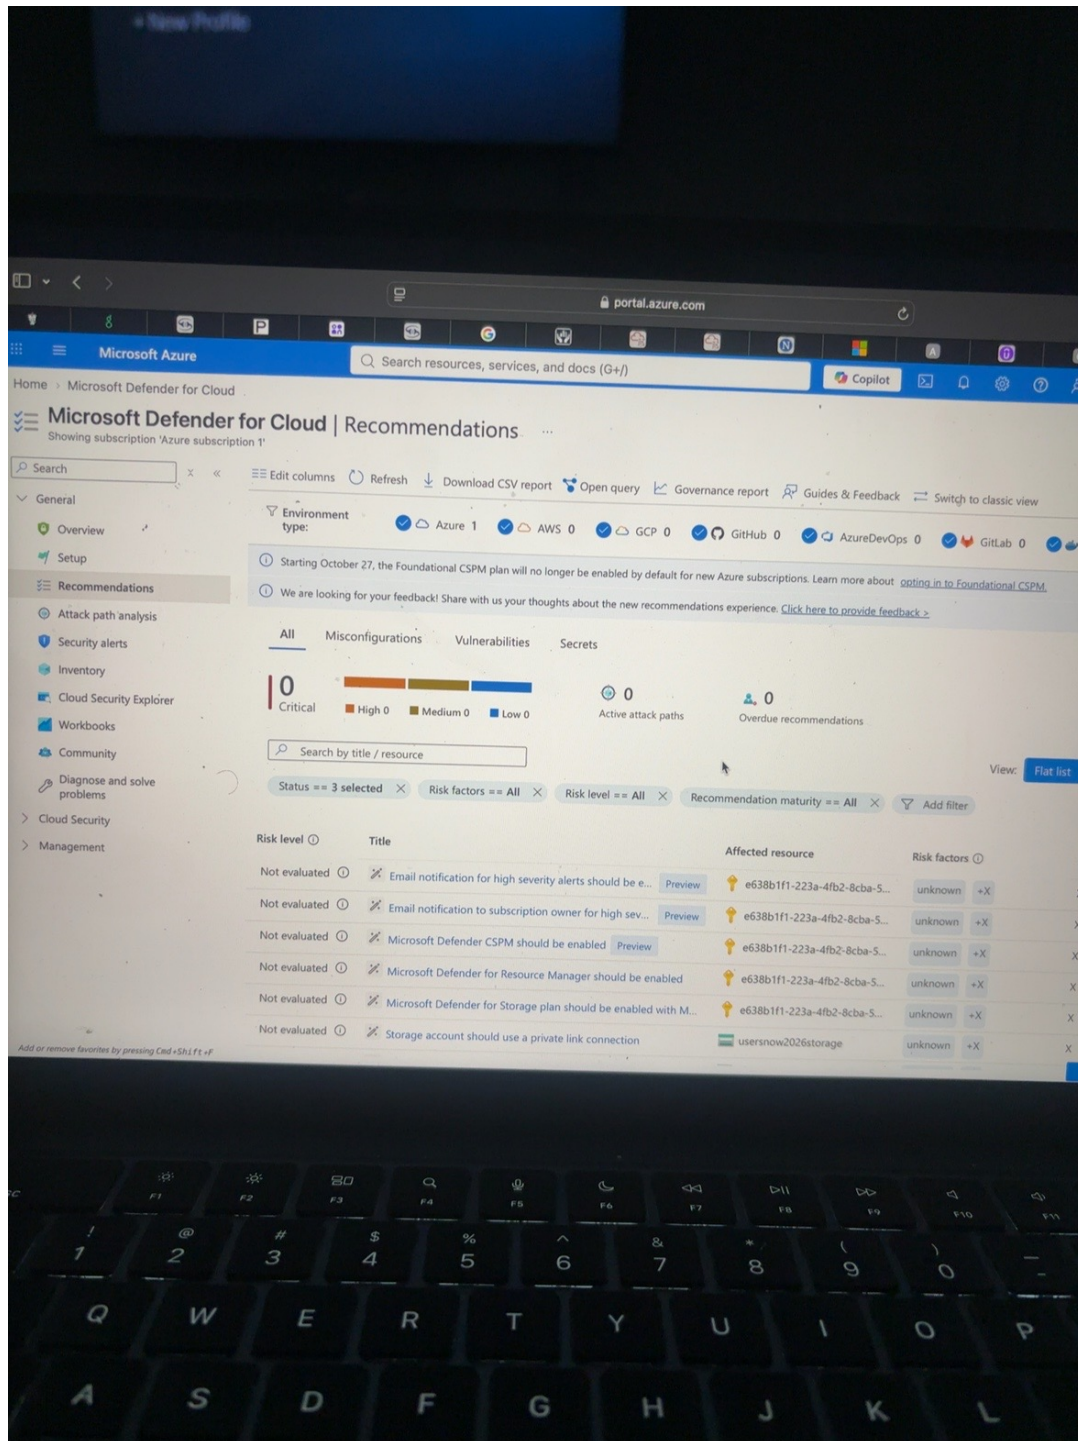

- Defender for Cloud • CSPM • Secure Score analysis • Security recommendation analysis • Azure storage network security • Private Endpoint/Private Link remediation planning • Cloud security evidence collection

Evidence

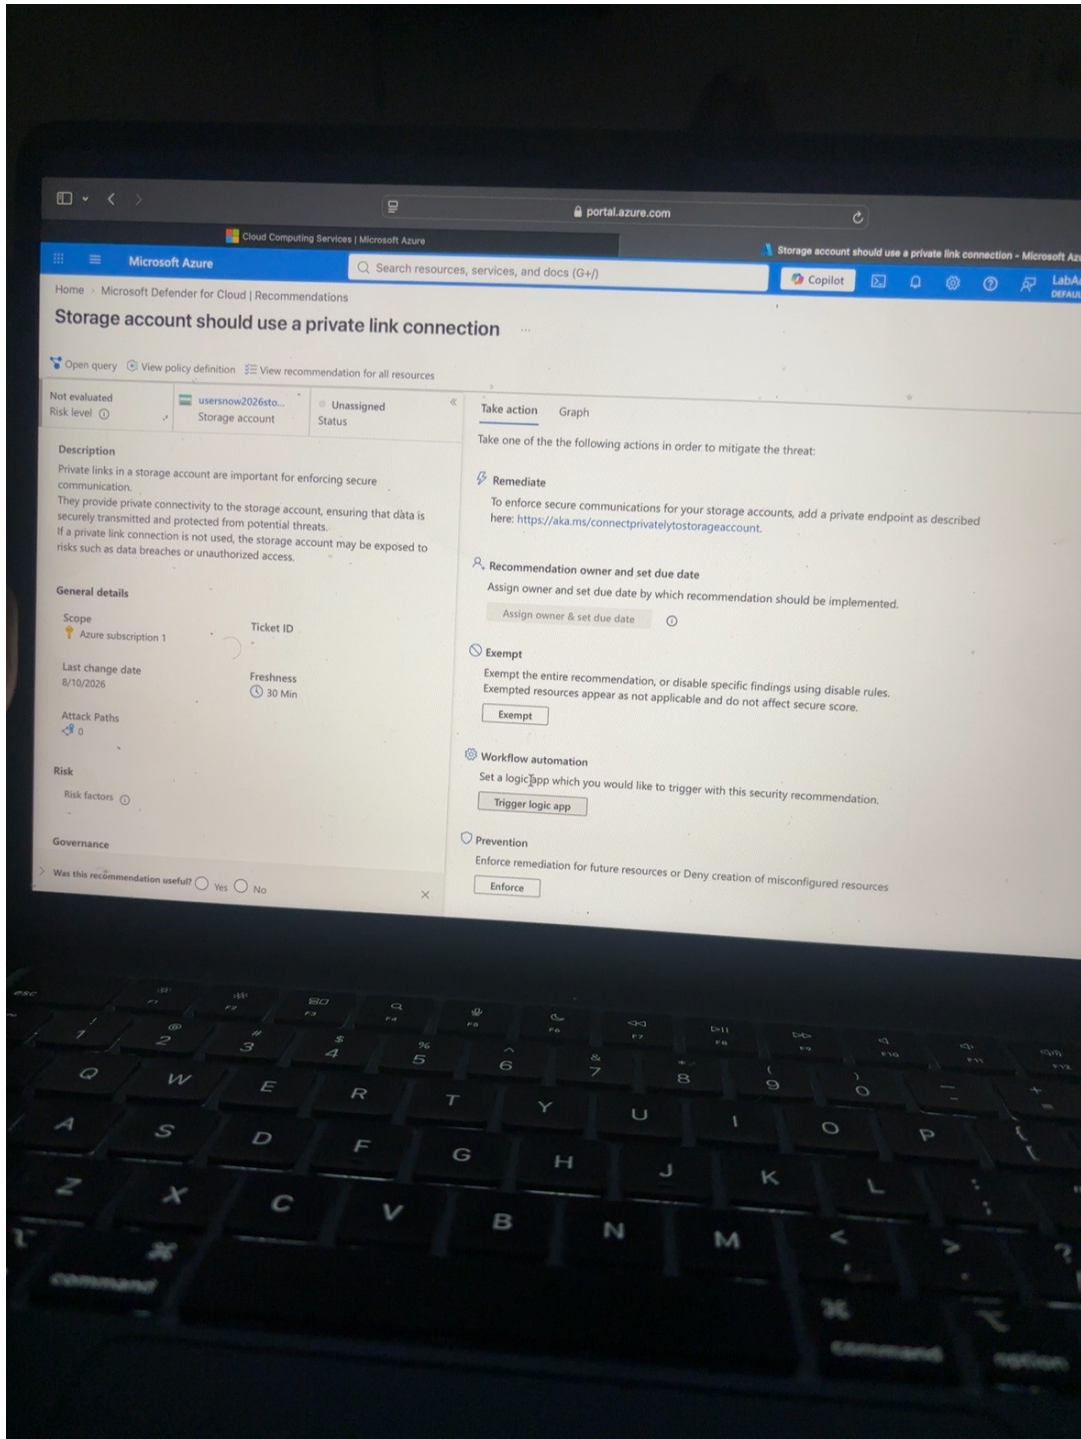

Evidence 1 — Defender for Cloud overview

Evidence 2 — Security recommendations

Evidence 3 — Private Link recommendation details

Evidence 4 — Graph requires Defender CSPM upgrade
